Academic Details

Year	Degree / Board	Institute	CGPA / Marks (%)
2023-Present	B.Tech in Computer Science(AI & ML)	Galgotias University, Delhi-NCR	7.58
2023	CBSE	The Air Force School, New Delhi	67%
2021	CBSE	The Air Force School, New Delhi	83%

Internships

AI Virtual Internship – Google for Developers

July – Aug 2025

Google for Developers Program / Remote

- Completed structured training on **AI/ML fundamentals**, covering supervised and unsupervised learning workflows
- Practiced **prompt engineering** techniques for reliable, structured LLM outputs
- Studied **responsible AI practices** including bias mitigation and model evaluation

Technical Skills

Languages	Java, Python, SQL, JavaScript
Tools & Infra	Spring Boot, FastAPI, Docker, Git
Databases	MySQL, PostgreSQL, pgvector
AI/ML	LangGraph, RAG, RAGAS, Langfuse, Prompt Engineering
Concepts	DSA, DBMS, OOP

Projects

FinLens – Multi-Agent Regulatory Filing Intelligence Platform

2026

LangGraph, pgvector, RAGAS, Langfuse, Spring Boot / Personal Project

[GitHub](#)

- Architected a **polyglot multi-agent pipeline** in **LangGraph** with a hard routing constraint sending all numeric/tabular queries to a dedicated Table Agent instead of free-text LLM generation
- Built **hybrid retrieval** over **pgvector** combining dense embedding search with metadata filtering, evaluated via **RAGAS** metrics (faithfulness, context precision) with full **Langfuse** tracing
- Fronted the Python agent pipeline with a **Spring Boot API gateway**, isolating orchestration/inference from a production-grade Java service layer

RagScope – Retrieval-Augmented Generation Platform

Jan – Mar 2026

Python, FastAPI, Next.js, PostgreSQL / Personal Project

[GitHub](#)

- Built an end-to-end **RAG pipeline** – ingestion, chunk-boundary-aware splitting (paragraph/section-aware, not fixed-length), embedding generation, and vector similarity search
- Served retrieval and generation through a **FastAPI** backend with **PostgreSQL** storage and a **Next.js** frontend for query interaction
- Enabled grounded natural-language querying over uploaded documents with **source-attributed responses** to reduce hallucination risk

Helpzy – Local Service Finder Platform

Mar – Apr 2026

Next.js, JavaScript, Tailwind CSS / Personal Project

[GitHub](#)

- Modelled the full system with **DFD Level 0/1 and sequence diagrams** prior to implementation, mapping data flow across customer, provider, and admin roles before writing code
- Built **role-based dashboards** with distinct access boundaries for customers, service providers, and admins on a shared Next.js codebase
- Designed a responsive, **component-driven UI architecture** in Next.js/Tailwind to support scalable addition of new service categories and workflows

Certifications

– Generative AI – GUVI, in collaboration with IIT Delhi	2025
– Java – GUVI	2024
– Python – GUVI	2024
– MySQL – GUVI	2024
– Database Design – Oracle Academy	2024
